Abstract

A checklist of the families Anisopodidae, Bibionidae, Canthyloscelididae, Mycetobiidae, Pachyneuridae and Scatopsidae (Diptera) recorded from Finland. The Finnish species of these families were last listed in 1980. After that two species of Anisopodidae, four species of Bibionidae and six species of Scatopsidae have been added to the Finnish fauna and two species of Scatopsidae have been removed from the Finnish fauna.

Keywords

Checklist, Finland, Diptera, biodiversity, faunistics

Introduction

Six families (Anisopodidae, Bibionidae, Canthyloscelididae, Mycetobiidae, Pachyneuridae and Scatopsidae) are included in this paper. All six families have been rather poorly collected and studied in Finland. Lundström (1910) published a study of the family Bibionidae. During the last one hundred years, foreign specialists have con-

Table 1. Number of species by family.

Family	Number of species in			Level of knowledge
	World (Pape et al. 2011)	Europe	Finland	
Anisopodidae	77	10	7	average
Mycetobiidae	35	4	1	average
Bibionidae	760	50	17	average
Scatopsidae	390	102	30	poor
Canthyloscelididae	16	3	3	average
Pachyneuridae	5	1	1	average

tributed the majority of the new records and taxonomic treatises. Some Anisopodidae were treated by Krivosheina and Menzel (1998, 2002) and Bibionidae by Greve and Haenni (1994) and Skartveit (1999). Finnish scatopsid records were included in the synopsis of Palaearctic Scatopsidae by Cook (1969, 1972, 1974). The genera *Anapausis* Enderlein (Chandler 1999, Haenni 1984), *Colobostema* Enderlein (Haenni 2013, Krivosheina 2001) and *Aspistes* Meigen (Krivosheina 2000) have been examined in more detail. Recently Anisopodidae (Haarto 2011) and Bibionidae (Haarto 2012) have attracted some attention in the country. The only Finnish species of Pachyneuridae, *Pachyneura fasciata* Zetterstedt, 1838, was studied by Salmela and Ilmonen (2004) and removed from the Finnish Red List. The Finnish species of all six families were last listed by Hackman (1980). The Finnish faunae of anisopodids and bibionids have been recently reviewed by Haarto (2011, 2012). The nomenclature and the number of European species are presented according to the current listing of Fauna Europaea (Beuk and Pape 2013).

HYPEROSCELIS Hardy & Nagatomi, 1960

Hyperoscelis eximia (Boheman, 1858)

Hyperoscelis veternosa Mamaev & Krivosheina, 1969

SYNNEURINAE Enderlein, 1936

SYNNEURON Lundström, 1910

Synneuron annulipes Lundström, 1910

superfamily Pachyneuroidea Schiner, 1864

PACHYNEURIDAE Schiner, 1864

PACHYNEURA Zetterstedt, 1838

Pachyneura fasciata Zetterstedt, 1838

Excluded species

Anapausis soluta (Loew, 1846): Specimens under the name *A. soluta* in the earlier checklist (Hackman 1980) represent the later described species *A. floricola* Chandler, 1999.

Swammerdamella acuta Cook, 1956: Has not been found within present borders of Finland.

Notes

Aspistes helleni Krivosheina, 2000 in this checklist based on other material than the one mentioned by Krivosheina (2000).
