## Abstract

The paper presents new faunistic data for 28 species of *Rhaphium* from Russia and supplements the previous data on species distribution. New faunistic data is given for the following species: *Rhaphium albifrons* Zetterstedt, 1843, *Rh. antennatum* (Carlier, 1835), *Rh. appendiculatum* Zetterstedt, 1849, *Rh. basale* Loew, 1850, *Rh. boreale* Van Duzee, 1923, *Rh. caliginosum* Meigen, 1824, *Rh. commune* (Meigen, 1824), *Rh. confine* Zetterstedt, 1843, *Rh. dichromum* Negrobov, 1976, *Rh. discolor* Zetterstedt 1838, *Rh. dispar* Coquillett 1898, *Rh. elegantulum* Meigen, 1824, *Rh. fasciatum* Meigen, 1824, *Rh. fascipes* (Meigen, 1824), *Rh. flavilabre* Negrobov, 1979, *Rh. glaciale* Ringdahl, 1920, *Rh. latimanum* Kahanpää 2007, *Rh. longicorne* (Fallen, 1823), *Rh. monotrichum* Loew 1850, *Rh. nasutum* (Fallen, 1823), *Rh. nigribarbatum* Becker, 1900, *Rh. patellitarse* Becker, 1900, *Rh. richterae* Negrobov, 1977, *Rh. riparium* (Meigen 1824), *Rh. rivale* Loew, 1869, *Rh. suavis* Loew, 1859, *Rh. tripartitum* Frey 1913, and *Rh. umbripenne* (Frey, 1915). Seven rare species (*Rhaphium basale*, *Rh. boreale*, *Rh. confine*, *Rh. dispar*, *Rh. fasciatum*, *Rh. flavilabre* and *Rh. longicorne*) are recorded for the first time in one or two Russian regions. ## Introduction

The genus *Rhaphium* (Meigen, 1803), included in the subfamily Rhaphiinae, is composed of 200 species, considering unpublished data (Negrobov et al. 2013a; Grichanov 2017). O.P. Negrobov (1979) published the first revision of the Palearctic species of this genus; all presented species were described, and key to the Palearctic species was presented. The last key to the female species belonging to *Rhaphium* was provided in 2017 (Kleschevnikova and Negrobov 2017). In addition, a checklist of Dolichopodidae of Russia was supplemented by the current year faunistic records included 66 species of *Rhaphium* (Negrobov et al. 2013a).

The following three species were not included in genus *Rhaphium* for Russia (Negrobov 1979, 1986; Yang et al. 2006): *Rhaphium doroteum* Negrobov, 1979, described from the Irkutsk region and Primorye, *Rhaphium terminale igorjani* Negrobov, 1986 and *Rh. neolatifacies* Yang et Wang, 2006 described from Sakhalin Island. Then I.Ya Grichanov provided the new species for Russian fauna (*Rhaphium nigrum* (Van Duzee, 1923) from Chukotka Peninsula (Grichanov 2018).

The genus was revised for the Palearctic Region by Negrobov (Negrobov 1979) and nine species and one subspecies were reported from Russia: *Rhaphium terminale igorjani* Negrobov, 1986, *Rh. jamalense* Negrobov, 1986, *Rh. macalpini* Negrobov, 1986 and *Rh. neolatifacies* Yang et Wang, 2006, *Rh. jonrichardi* Negrobov et Grichanov, 2010, *Rh. brooksi* Negrobov, Barkalov et Selivanova, 2011, *Rh. subtridactium* Negrobov, Barkalov et Selivanova, 2011 and *Rh. sibiricum* Negrobov, Barkalov et Selivanova, 2011, *Rh. borisovi* Negrobov, Barkalov et Selivanova, 2012, *Rh. caucasicum* Negrobov, Grichanov et Selivanova 2013 (Negrobov 1986; Negrobov and Onishchenko 1991; Negrobov and Grichanov 2010; Negrobov et al. 2011, 2012, 2013b).

## Material and methods

We examined the specimens from the collection of the Zoological Institute of the Russian Academy of Sciences (ZISP) and the collection of Department of Ecology and Systematics of Invertebrates of Voronezh State University (VU). In addition, several specimens were examined from the collection of the Zoological Museum of Moscow State University (ZMMU).
